

Weekly Report 17

Akshay Thontakudi, Varun Lahoti, Gerardo Molina
January 24, 2019

PROGRESS

This week Group 17 spent its time finalizing CAD drawings of the ball-and-socket mechanism. The process required leveraging different CAD libraries as some of the CAD skills were above the group's capacity.

The agenda for the upcoming week will be to:

- 3D print our first prototype of the clamp
- Create testable specifications for our device
- Update design specifications from Professor and client recommendation
