

Weekly Report 9

Akshay Thontakudi, Varun Lahoti, Gerardo Molina
October 26, 2018

PROGRESS

This week was spent creating additional CAD mockups and designs of the potential device. In addition, further research was done to determine pitfalls to avoid when designing in CAD, including tips to follow that will ensure structural integrity of the prototype. Besides prototyping, we have been updating the webpage with more information about the project and current status

QUESTIONS

For the Group:

- How many design ideas do we want to show the client?
- When do we want to start the actual 3D printing process?
